

Nature of the service in securing construction sites

The electronic monitoring service for construction sites and vacant buildings - temporary and rental - is offered in the form of a monthly fee, the price of which is calculated according to the rental period and the size and complexity of the installation.

[Construction site safety package details](#)

This rental system is a package for the security professions. It is based on:

- a complete upstream study of the site's needs according to the destination of the structure, the geographical environment, the quality of its services and its lifespan,
- the installation of high-performance electronic safety equipment combining the best technologies and adapted to the specificities of the site,
- rental of electronic surveillance equipment,
- remote monitoring,
- physical interventions on alarms (unlimited number of interventions on intrusion alarm),
- preventive and curative maintenance of the installation making it possible to adapt to the evolution of the structure, during the duration of our mission of electronic security of the site, or of the empty building,
- insurance coverage studied according to the risks inherent in the profession.
